

Report of the Assignment 1

Task A — Anatomy of a Real Page

For this task, we chose the real website of **Bahandi Burger** because it is a real fast-food restaurant website. We examined its HTML code to understand how the page is structured and which HTML elements are used.

1. Basic HTML information

We checked the beginning of the HTML code and found the following information:

- **Doctype:** `<!DOCTYPE html>`
- **Language attribute:** `lang="utf-8"`
- **Character encoding:** UTF-8
- **Viewport:** `width=device-width, initial-scale=1.0, user-scalable=0`
- **Title:** Bahandi Burger – сеть стрит-фуд кафе быстрого питания

The website also has meta tags. For example, there is a keywords meta tag with words related to Bahandi Burger, burgers and fast food. There is also a description meta tag that describes Bahandi Burger as a street-food fast-food cafe chain.

2. Semantic elements and div elements

The website uses semantic HTML elements, including `<nav>` and `<footer>`. The `<nav>` element is used for navigation links, for example links to contacts, restaurants, policy and offer pages. The `<footer>` element is used for information at the bottom of the page.

At the same time, the HTML code contains many `<div>` elements. They are mainly used as containers for different parts of the layout, products, buttons and other interface elements. Classes are also used on these elements.

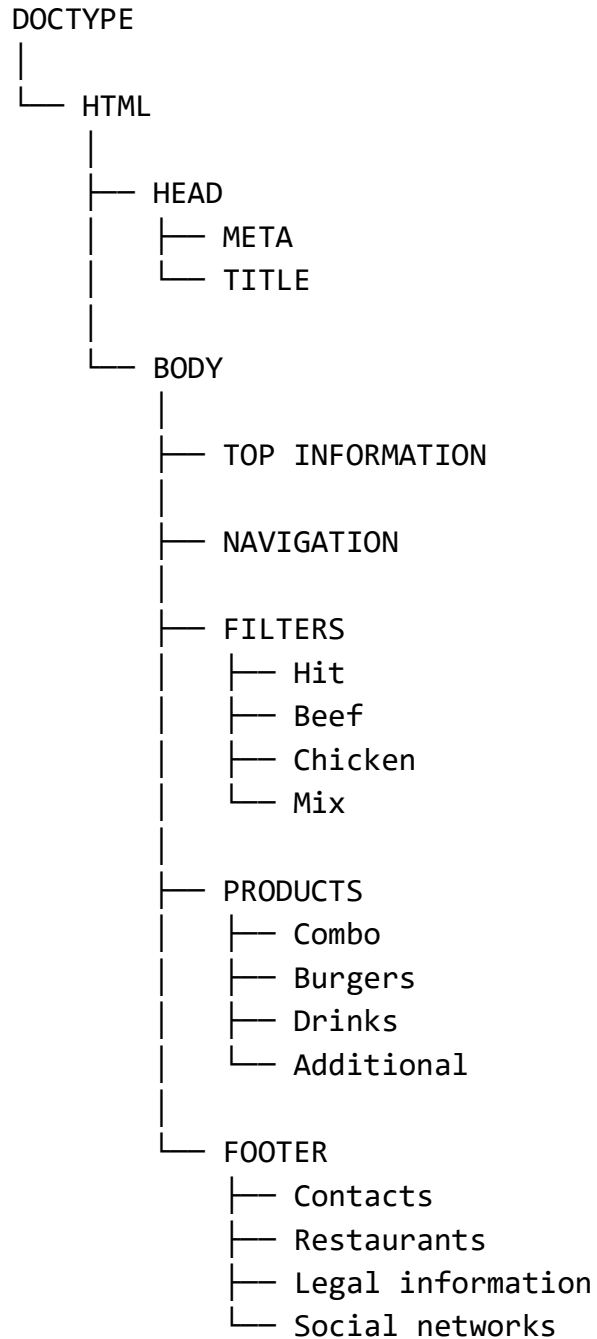

3. Forms and tables

We found forms in the HTML code. For example, the website uses a form for adding a product to the shopping cart. The form has an `action` attribute and uses the `post` method.

We did not find a `<table>` element in the HTML code that we examined. The product information is shown using other HTML elements instead of a table.

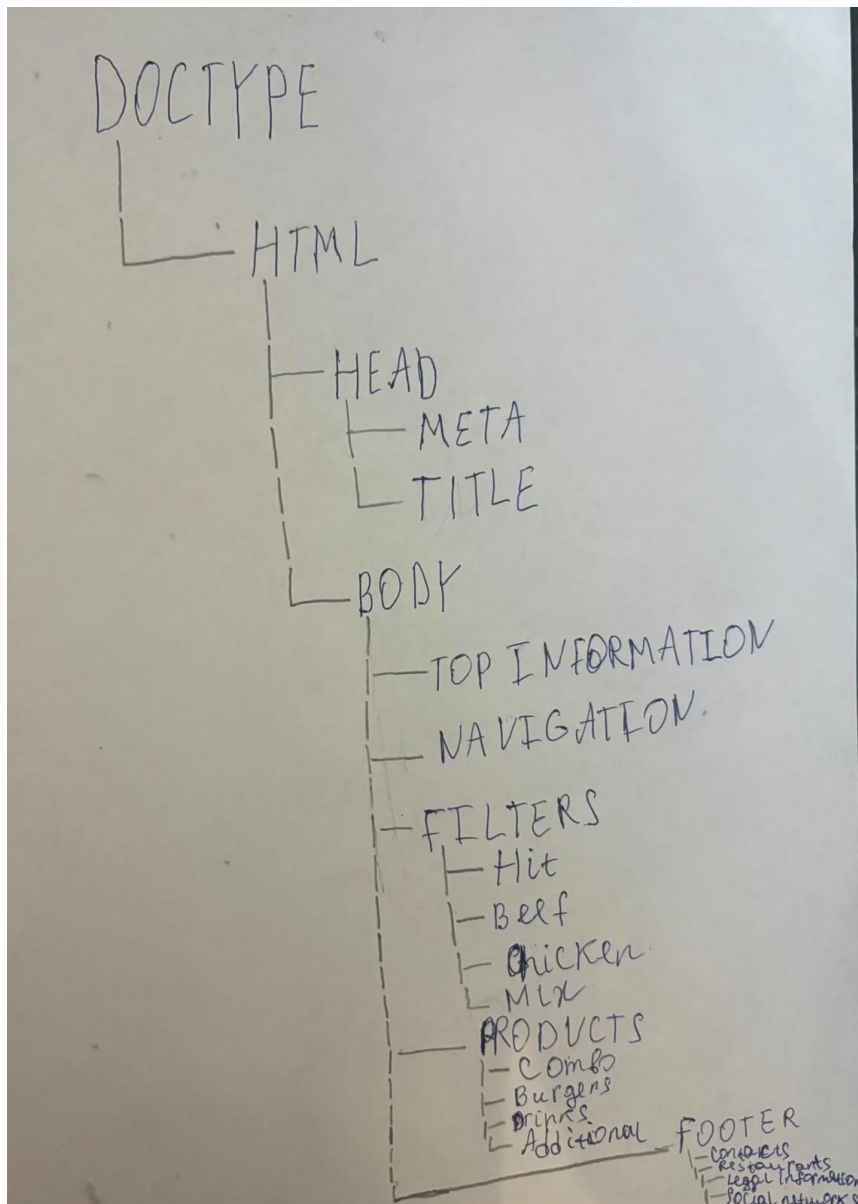

4. Page structure sketch

For the hand-drawn sketch, our group will show the main HTML structure of the Bahandi Burger page:

We will draw this structure by hand and add our group number, names, date

Drawn sketch

Group number: SE-2535

Names: Ali Nadirov, Nurasyt Mazhit, Alikhan Kuttibayev

Date: 13.09.2026

The website also uses external CSS and JavaScript resources, but we did not include them in our HTML structure sketch because CSS and JavaScript are not allowed in our Assignment 1 project.

5. Three structural problems we noticed

1. The page uses many `<div>` containers.

There are many generic `<div>` elements used for layout and grouping. This can make the HTML structure harder to understand. In our project, we try to use semantic elements when they have a clear purpose, such as `<header>`, `<nav>`, `<main>`, `<section>` and `<footer>`.

2. The lang attribute is used incorrectly.

The page has `lang="utf-8"` in the `<html>` element. The `lang` attribute should indicate the language of the page, while UTF-8 is the character encoding and is already specified separately with `<meta charset="UTF-8">`. In our project, we use a language code such as `lang="en"`.

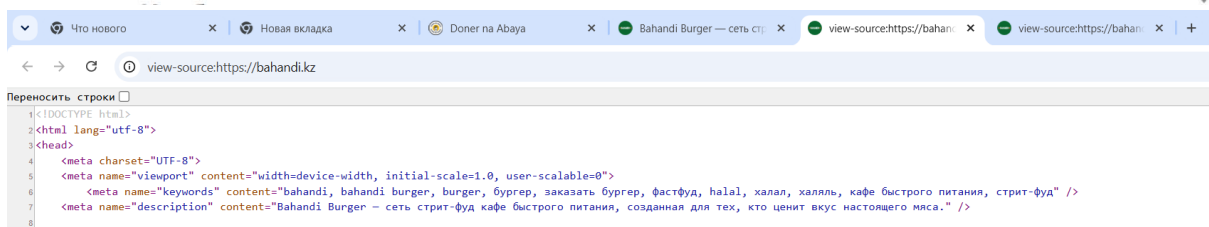

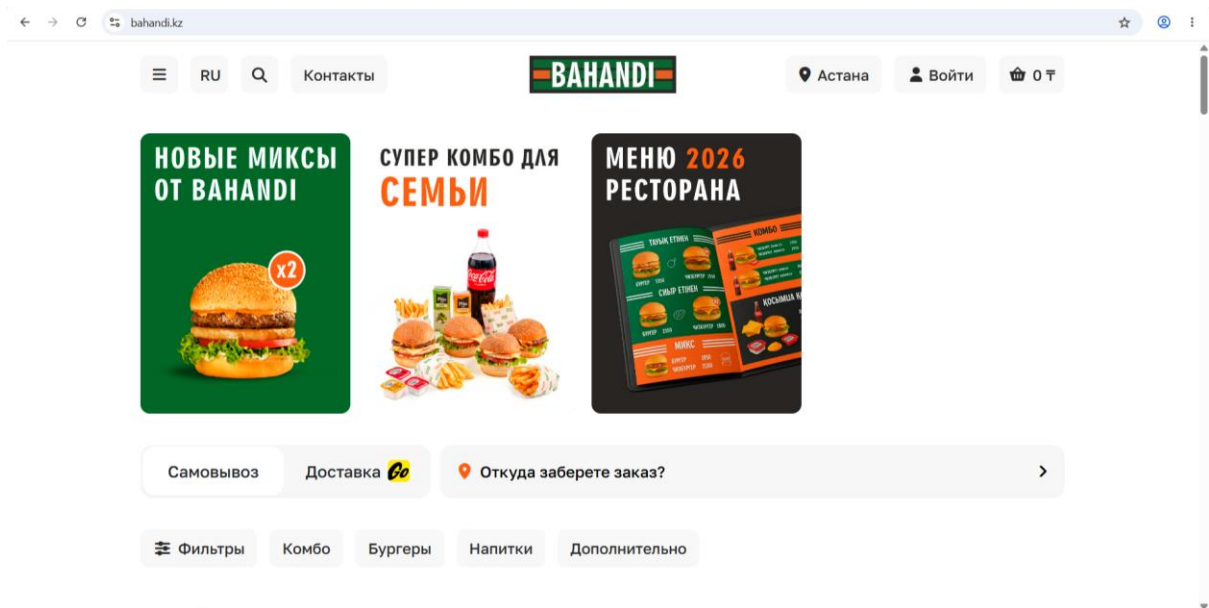

3. The HTML structure has many general containers with classes.

Many parts of the page are grouped inside elements with classes. This makes the code more difficult to read when we look only at the HTML structure. In our project, we use semantic elements where possible to make the purpose of different parts of the page clearer.

Conclusion

After examining the Bahandi Burger website, we understood that a real website can have many HTML elements, forms and different containers. We also compared its structure with the requirements of our own project. This helped us understand why it is important to choose HTML elements according to their purpose and keep the page structure clear.

A web page is an HTML document that contains different parts of information and structure. In our project, each page has a head and a body. The head contains metadata, the page title and viewport settings. The body contains visible content such as the header, navigation, main content, images, text, forms and footer. For example, our website uses separate pages for different parts of the Doner na Abaya project.

menus, forms, and the footer. Our website uses several pages to present different parts of the Doner na Abaya project.

When someone opens an HTML page, the browser reads the HTML code and uses it to understand how the content should be organized. It then displays the page by showing elements such as headings, paragraphs, links, images, and forms in the correct places.

In our project, we tried to use semantic HTML elements whenever possible because they clearly describe the purpose of the content. For example, we use `<header>` for the top part of the page because it contains the website title and navigation links. We use `<section>` to separate different topics and organize related information. We also use `<footer>` for contact details and copyright information because it represents the bottom section of the page.

Our review page contains a form with a “Submit Review” button. When the button is pressed, the browser opens the specified page. However, since our project does not include a server or database, the submitted review is not permanently stored.

Project Colophon

About the Project

This project is about Doner na Abaya, a fast-food restaurant in Astana. I chose this restaurant because it is a real place that I could visit. During my visit, I collected information about its services, working hours and location, and took several photos for the website.

The website was created as part of an HTML project. While making the pages, I used different HTML elements that we learned in class.

This Colophon page shows some of the HTML elements used in the project. The code element displays a short piece of HTML code, the pre element keeps the original formatting of text, the kbd element is used for keyboard shortcuts, and the samp element shows computer output.

While working on this project, I got more practice with HTML and learned how different elements can be used on a real website. I also learned how to organize information so that it is easier to read and navigate.

HTML Example

An HTML paragraph can be written as `<p>Hello</p>`.

HTML Structure

```
<header>
  <nav>
    <ul>
      <li>Home</li>
      <li>Project</li>
```

127.0.0.1:3000/colophon.html?vscode-livepreview=true

While working on this project, I got more practice with HTML and learned how different elements can be used on a real website. I also learned how to organize information so that it is easier to read and navigate.

HTML Example

An HTML paragraph can be written as `<p>Hello</p>`.

HTML Structure

```
<header>
  <nav>
    <ul>
      <li>Home</li>
      <li>Project</li>
      <li>Menu</li>
      <li>Reviews</li>
      <li>Gallery</li>
      <li>Order</li>
      <li>FAQ</li>
      <li>About</li>
    </ul>
  </nav>
</header>
```

Saving the File

To save changes in the HTML file, press `Ctrl + S`.

Example Result

A browser may display a message such as `File saved successfully`.

About the Restaurant

Doner na Abaya is a fast-food restaurant. Our branch is at 51 Mangilik El. It offers doners with different meat, sauces, vegetables, drinks, and takeaway. The restaurant works 24 hours a day. You can also learn about the [branch](#) and its [offers](#).

During our visit, the place was clean and cozy. The staff were polite, and I liked the doner and special sauce.

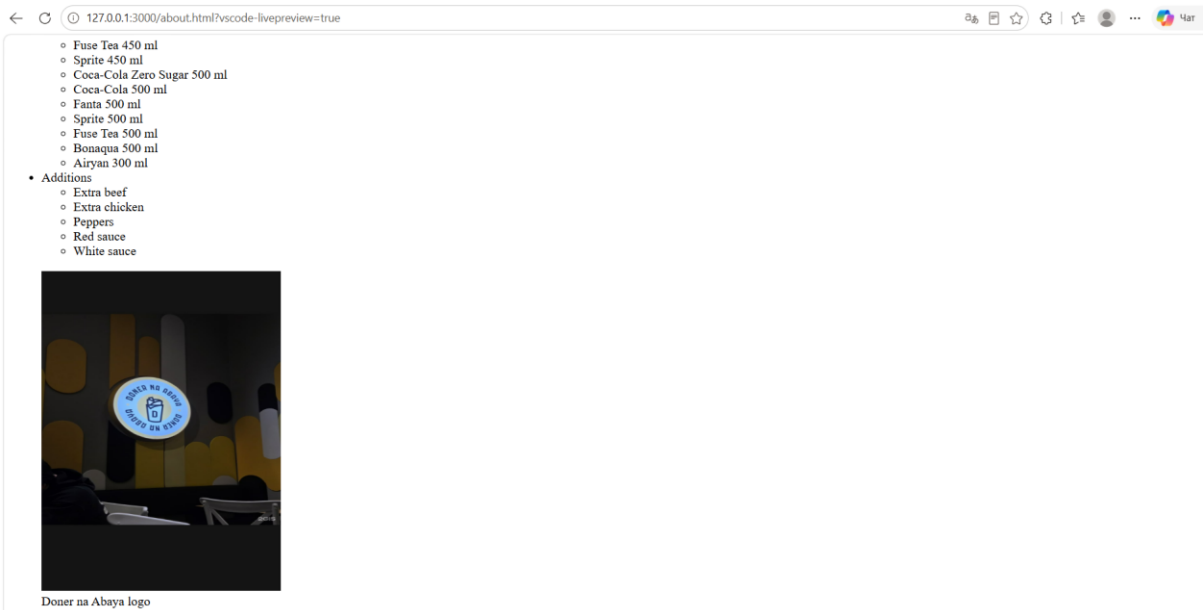

About the Branch

The branch is easy to find. Customers can order at the counter or take food away. Preparation usually takes 15–20 minutes, but waiting can be longer during busy hours.

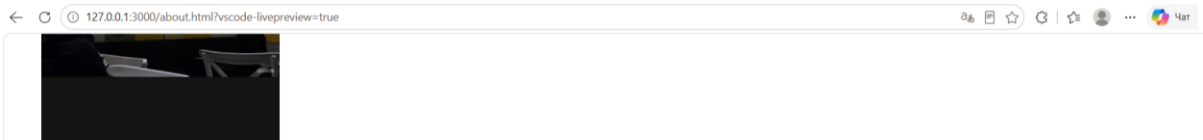

What the Restaurant Offers

The restaurant offers doners, drinks & additions:

- Doners
 - M chicken
 - M beef
 - M assorted
 - S chicken
 - S beef
 - S assorted
- Drinks
 - Coca-Cola Zero Sugar 450 ml
 - Coca-Cola 500 ml
 - Fanta 450 ml

Customer Opinion

Arman's opinion:

I liked this branch. The doner was fresh and filling, the order was prepared quickly, and the place was clean. I especially liked the sauce.

Gallery

This gallery shows photos from a visit to Doner na Abaya and the branch interior.

Photos

How the Visit Goes

1. The visitor enters and looks at the menu.
2. The visitor chooses food and places an order.
3. The visitor waits while the order is prepared.
4. The visitor receives the order and finds a table.

4. The visitor receives the order and thus a table.
5. The visitor eats and then leaves.

Additional Information

"The clean dining area and fast service were noticeable during the visit."

Photos were taken during the visit.

A visitor said: "The doner was very tasty, and the order was ready faster than I expected."

The restaurant is near Mangilik El Avenue.

There are comfortable places for dining inside. The branch works 24/7.

For more information, see the [FAQ](#) section.

Menu of Doner na Abaya

In Russian it is called Донер на Абая. Jump to the [prices](#) or to the [drinks](#).

Doners and Prices

Each doner comes in two sizes. Prices are in ~~KZT~~, copied from the board at our branch.

Doner prices at our branch

Doner	Standard	Large
-------	----------	-------

Chicken	1895 ₸	2195 ₸
---------	--------	--------

Beef	2195 ₸	2495 ₸
------	--------	--------

Assorted	2095 ₸	2395 ₸
----------	--------	--------

The menu board

How to Build Your Doner

1. Choose chicken, beef or assorted.
2. Choose standard or large.
3. Add sauce or extra meat.
4. Eat in or take away, and pay.
5. Wait about 15–20 minutes.

Our doner

Drinks and Extras

Drinks have two prices, one for each size in ml.

- Drinks
 - Coca-Cola, Zero Sugar, Fanta, Sprite, Fuse Tea: 795 or 845 ₸
 - Bonaqua: 595 ₸
 - Ayran: 595 ₸
- Extras
 - Extra chicken 50 g: 590 ₸
 - Extra beef 50 g: 690 ₸
 - Fries: 895 ₸
 - Any sauce: 200 ₸
 - Peppers: 100 ₸

Menu Words

Doner

Grilled meat with vegetables and sauce. *Döner* means “turning” in Turkish.

Assorted

Chicken and beef together.

Ayran

A cold sour-milk drink.

Good to Know

The branch works 24/7, but **on Fridays there is a break from 12:30 to 14:00**. The board also carries a halal certificate.

The official website *Doner na Abaya* says “Сочные донеры от 1795 ₸!” (“Juicy doners from 1795 tenge!”), but the cheapest one now costs 1895 ₸. **Prices change, so check the [website](#) before you go.**

Checked in September 2026.

Customer Reviews

These are real opinions about the branch at 51 Mangilik El Avenue. Read the [reviews](#) or go to the [review form](#) to add yours.

What Visitors Say

Arman

I liked this branch. The doner was fresh and filling, the order was prepared quickly, and the place was clean. I especially liked the sauce.

Told to our team on 10th September 2026.

Araylym, staff member

All our meat is halal. A lot of people come to us exactly for this reason

Told to me at the branch on 11th September 2026.

Our Team's Visit

The place was clean and cozy, and the staff were polite. We liked the doner and especially the special sauce. Like Arman, we found the doner “fresh and filling”. Preparation usually takes 15–20 minutes and longer at busy hours, so *order before you get too hungry*.

Our Team's Visit

The place was clean and cozy, and the staff were polite. We liked the doner and especially the special sauce. Like Arman, we found the doner "fresh and filling". Preparation usually takes 15–20 minutes and longer at busy hours, so *order before you get too hungry*.

— Your review

Leave a Review

Your review

Name:

Email:

Phone:

Date of your visit:

Minutes you waited:

Doner you tried:

Your rating:

☐ 5 Excellent ☐ 4 Good ☐ 3 Okay ☐ 2 Bad ☐ 1 Very bad

Your review:

What did you like, and what can be better?

☐ My name and review can be shown on this page.

How the Form Works

Press Tab to go to the next field. An empty required field shows Please fill out this field. Because of method="get", Submit only puts all answers in the address bar, like this: reviews.html?name=Aigerim&email=aigerim%40mail.kz&phone=6&visit_date=2026-09-12&wait_minutes=15&doner=chicken-1&rating=5&review=Tasty&publish_ok=on

Nothing reaches the restaurant. Email the page author at alik.kuttybayev@gmail.com or tell the staff in person.

Alikhan AI Usage Log

AI Usage Log

Project: Doner na Abaya Website **Course:** Introduction to Web Technologies

In this project, our team used AI tools (Gemini and Claude) only to understand HTML theory, find mistakes, and check grammar. We wrote all the code and main texts ourselves. We did not use AI to generate images or write HTML structures.

Prompt 1

AI Tool: Gemini **Prompt:** "What is the difference between <section> and <article> tags in HTML5? Explain in simple words." **Why we asked:** We needed to choose correct semantic tags for our personal pages to follow the assignment rules. **How we used the answer:** Gemini explained that <article> is for independent text. We decided to use <article> for each customer review on the reviews.html page, and <section> for big parts of the page.

Prompt 2

AI Tool: Claude **Prompt:** "Check my English grammar for this text about a doner cafe: [our draft text]" **Why we asked:** Every page needs 150-250 words. We wrote the text about doners, but we wanted to fix small grammar mistakes. **How we used the answer:** Claude fixed some articles (a/the) and verb tenses. The ideas, facts, and prices are 100% our own. We just used it like a dictionary.

Prompt 3

AI Tool: Gemini **Prompt:** "How to connect a <label> to an <input> in a form without CSS?" **Why we asked:** We were building the order form, but when we clicked on the text, the radio button did not select. **How we used the answer:** The AI showed that we must use the `for` attribute in the label and the `id` attribute in the input with the same word. We fixed this in our HTML files.

Prompt 4

AI Tool: ChatGPT **Prompt:** "W3C Validator shows error: 'Table column 2 established by element th has no cells beginning in it'. What does it mean?" **Why we asked:** We got a red error when we checked our `menu.html` on the W3C website. **How we used the answer:** The AI explained that we have an extra `<th>` tag in the `<thead>` but we forgot a `<td>` tag in the `<tbody>`. We found the problem line and wrote the missing tag ourselves.

Ali Nadirov Ai Usage Log

Project: Doner na Abaya Website

Course: Introduction to Web Technologies

In this project, our team used AI tools only to understand HTML theory, check our HTML code, find mistakes, and understand the assignment requirements. We wrote the code and main project content ourselves. We did not use AI to generate images.

Prompt 1

AI Tool: Gemini

Prompt: "How should the navigation be structured if the <nav> must contain a list of relative links to every page of the website?"

Why we asked: We needed to make sure that the navigation on our pages followed the assignment requirements and did not have HTML validation errors.

How we used the answer: Gemini explained that the links should be inside a `<ul>` and each link should be inside an `<li>`. We used this information to correct the navigation structure in our HTML pages.

Prompt 2

AI Tool: Gemini

Prompt: "W3C Validator shows errors because `<li>` is directly inside `<nav>`. What is wrong?"

Why we asked: We checked our `index.html` with the W3C Validator and received errors related to the navigation list.

How we used the answer: Gemini explained that `<li>` elements cannot be direct children of `<nav>`. We added the `<ul>` element and placed the `<li>` elements inside it. We then checked the page again.

Prompt 3

AI Tool: Claude

Prompt: "What does 'with all screenshots' mean in the assignment submission requirements?"

Why we asked: We wanted to understand which screenshots should be included in our PDF report for Task A and Task B.

How we used the answer: Claude explained that the report should contain screenshots that show evidence of our work, such as screenshots of the analyzed website, HTML code, our project pages, and W3C Validator results.

Prompt 4

AI Tool: ChatGPT

Prompt: "How should we write the author information if `index.html` and `colophon.html` are common group pages?"

Why we asked: These two pages are shared by our group, so we needed to understand how to show the authors correctly.

How we used the answer: ChatGPT explained that we can include all three group members in the author information for the common pages. We use the author meta tag

and an HTML comment with the authors' names.

Mazhit Nurasyil AI usage log

Project: Doner na Abaya HTML Website Student: Mazhit Nurasyil Course: Web Technologies

Date: 12 September 2026 AI Tool: Gemini Question: What is the difference between and tags in HTML? Explain in simple words. Purpose: I needed to know how to choose the correct HTML tags to follow the assignment rules. Answer summary: The AI explained that is for independent text, and is for bigger parts of a page. This helped me use the tags correctly.

Date: 11 September 2026 AI Tool: Claude Question: Check my English grammar for this text about a doner. Purpose: I wanted to fix small grammar mistakes in the website text that I wrote myself. Answer summary: The AI corrected basic grammar like articles and verb tenses. It did not change my original ideas or facts.

Date: 12 September 2026 AI Tool: Gemini Question: How to connect a to an in a form without CSS? Purpose: I wanted to fix a problem where clicking the text did not select my radio button in the order form. Answer summary: The AI explained that the for attribute in the label and the id attribute in the input must use the exact same word.

Date: 13 September 2026 AI Tool: Gemini Question: W3C Validator shows error: 'Table column 2 established by element th has no cells beginning in it'. What does it mean? Purpose: I wanted to understand a red error message on the W3C checker for my menu page. Answer summary: The AI explained that I had an extra <th> tag but missed a <td> tag. This helped me find the mistake in my code and fix it myself.
